

## **Is Your Building Prepared Should a Fire Break Out?**

It is of utmost importance that your building is up to code with fire equipment installation. In addition, making sure that your employees go through safety training can greatly reduce workplace accidents.

Shaya Fire has trained knowledgeable professionals who are able to assess your working environment to determine if it is safe and prepared from a safety management perspective. We assess companies and buildings in line with the SABS or SANS regulations 1475 (firefighting equipment), 0400 (section T fire prevention) and regulation 0139 (evacuation procedures). In addition, we take into account the OHS Act and the equipment which should be present, such as first aid boxes, directional and emergency evacuation signage.
